

# Pathway MBS's SIP Trunking

## Phone Service for Business

Save up to 50% on your monthly phone bill by switching your phone service to [YOUR COMPANY'S] SIP Trunking. SIP Trunking service routes your calls over the Internet and works with most phone systems.

Reduce phone  
Service costs by  
up to 50%

Protect your  
business from  
local outages

Enhanced  
features increase  
productivity

Easy to deploy  
and manage

Financially  
backed  
99.999%

Pathway MBS's SIP Trunking reduces **your** monthly phone bill, increases your phone system reliability and offers enhanced business features and more.

### Reduce your overall telecom spend

Switching from expensive phone company lines to Pathway MBS's SIP Trunking can mean less infrastructure to manage, reducing the load on your IT staff and thus lowering your total cost of ownership. With our SIP Trunking, you can leverage your existing PBX investment or with the cost savings, purchase a new IP PBX.

SIP Trunking service is flexible and easy to scale, allowing you to purchase only the number of trunks you need, and easily add more.

### Built-in business continuity features

Pathway MBS's SIP Trunking helps ensure business continuity in the event of a power outage, weather emergency or other local service disruption by automatically rerouting your traffic to a predetermined failover number at no extra charge.

### Enhanced business features

Enhanced features such as WebFax, Remote Market Numbers, and Voicemail can increase productivity and your business reach while providing additional business continuity support.

Use your Internet  
connection for your phones

Reduce your calling rates

Optional enhanced  
features including:

Auto Attendant, Find Me,  
Voicemail, WebFax, Toll-  
free and Remote Market  
Numbers

Easy to scale – purchase  
only the trunks you need

24/7 technical support

### Easy to deploy

With Pathway MBS, SIP Trunking is easy to deploy and easy to manage. We perform all setup, switching, porting, migration and installation tasks, including:

- Inspecting your current phone system for SIP Trunking compatibility
- Testing your network to help ensure it can support high-quality voice
- Perform digital tasks necessary to transfer your phone trunks
- Setting up and deploying VoIP gateways, if necessary
- Performing onsite support
- Setting up your web-based management portal

### Clear voice quality

We comprehensively test your network (simulating your call volume) to help ensure your data circuit and local network can handle high-quality, clear voice calls before we install your service.

### Online management portal

Once you are up and running, you'll manage your SIP Trunking service using our powerful online management portal. Login from any location, on or offsite.

### 99.999% uptime SLA & 24/7 technical support

We offer a financially backed 99.999% (five nines) uptime SLA. That's less than 6 minutes per year of downtime.
